

IAOS 2014 Conference – Meeting the Demands of a Changing World
Da Nang, Vietnam, 8-10 October 2014

Projects of Open Data for Official Statistics

Toshihiko AKATANI

Deputy Director,

Planning and Management Office,

National Statistics Center (NSTAC)

I. Introduction

II. Project 1: Development of an environment for advanced use of statistics by API

III. Project 2: Improvement of statistics GIS

IV. Project 3: Study of on-demand tabulation functions

V. Future work and some implications

VI. Conclusion

I. Introduction

II. Project 1: Development of an environment for advanced use of statistics by API

III. Project 2: Improvement of statistics GIS

IV. Project 3: Study of on-demand tabulation functions

V. Future work and some implications

VI. Conclusion

8. We therefore agree to follow a set of **principles** that will be the foundation for access to, and the release and re-use of, data made available by G8 governments.

They are:

- **Open Data by Default**
- **Quality and Quantity**
- **Useable by All**
- **Releasing Data for Improved Governance**
- **Releasing Data for Innovation**

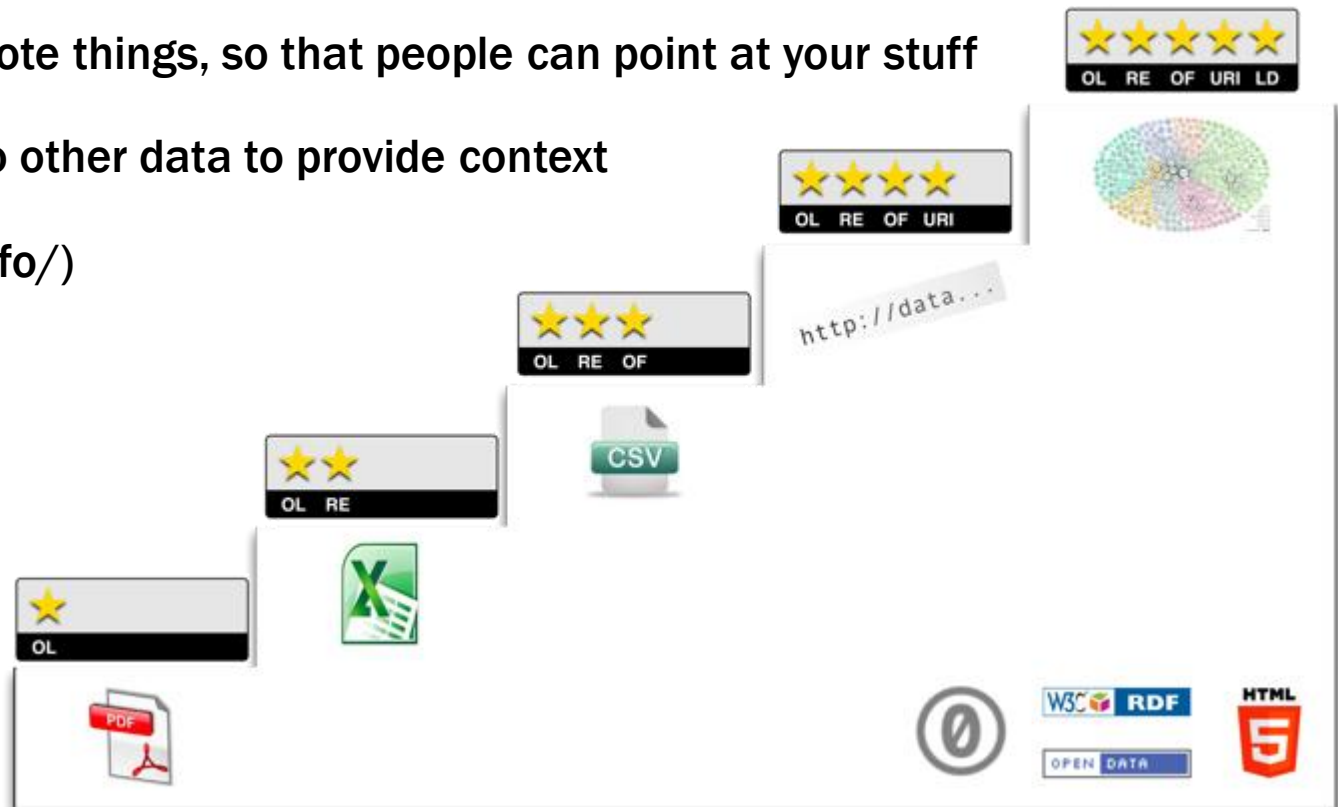

Picture: <http://lod-cloud.net/>

Five Levels of Open Data

Tim Berners-Lee, the inventor of the Web and Linked Data initiator, suggested a 5 star deployment scheme for Open Data

- ★ make your stuff available on the Web (whatever format) under an open license
- ★★ make it available as structured data (e.g., Excel instead of image scan of a table)
- ★★★ use non-proprietary formats (e.g., CSV instead of Excel)
- ★★★★ use URIs to denote things, so that people can point at your stuff
- ★★★★★ link your data to other data to provide context

(Source: <http://5stardata.info/>)

June 2013

Japan Revitalisation Strategy – JAPAN is BACK – (adopted by the Cabinet)

- ◎ Make the 2-year period between FY2014 and FY2015 the intensive period for taking measures
- ◎ Launch the data catalog website (trial version)
- ◎ Offer the world's top-level data sets to disclose (more than 10,000) by the end of FY2015

The screenshot shows the header of the 'DATA BETA GO.JP' website. The header includes the text 'データカタログサイト 試行版' (Data Catalog Site Trial Version) and a navigation menu with items: 'What's New', 'Terms of Use', 'Data', 'Open Data Initiatives', 'Communication', and 'Statistics'. Below the header, there is a section titled 'about data.go.jp' which contains an image of several blue cards with the words 'OPEN DATA' and a text block explaining the site's purpose and the types of data to be made available.

日本語 | English

DATA BETA GO.JP データカタログサイト 試行版

What's New Terms of Use Data Open Data Initiatives Communication Statistics

about data.go.jp

This Site was set up as a trial version of the Data Catalog Site. Its purposes are to provide a sphere for the use of data owned by different governmental ministries and agencies as open data and to present the image of open data to both data providers and data users.

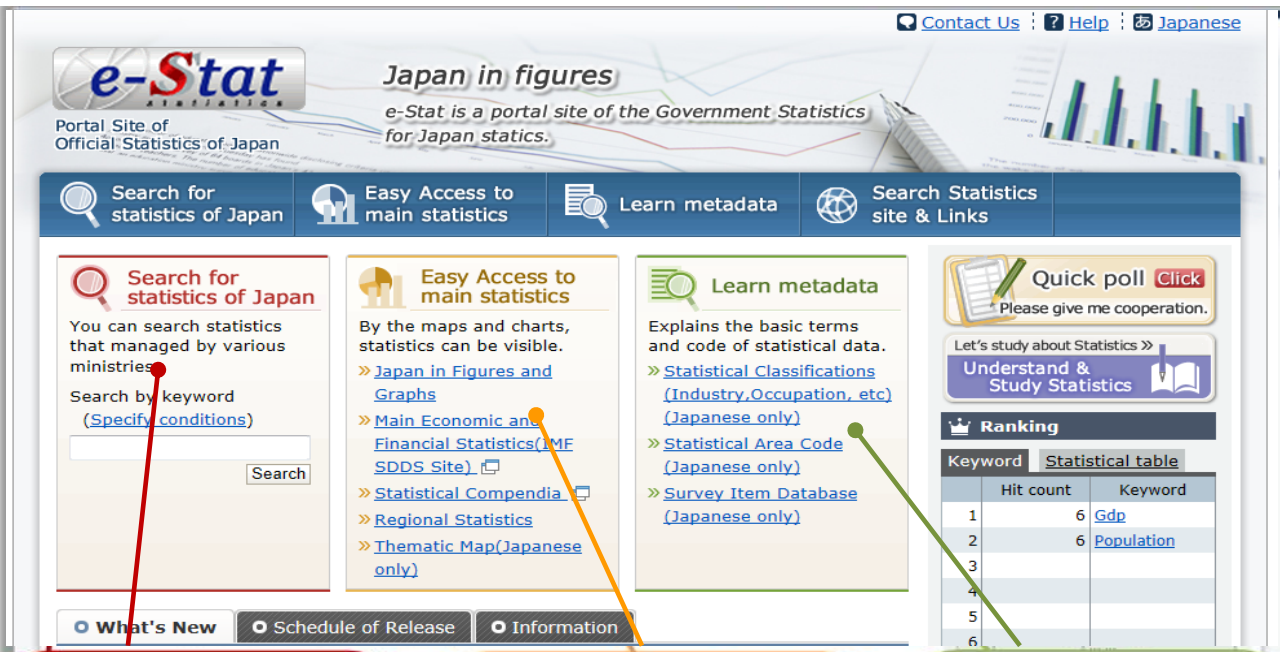

It will encourage the use of open data and help collect examples of use so that points to be improved will be studied for the construction of a fully fledged Data Catalog Site based on users' feedback on the trial version.

The data that will be made available will consist chiefly of white papers, disaster prevention and mitigation, geographical space information, data on human movement and data on budgets, final accounts and procurement, which were defined as priority fields in the Roadmap for Promotion of Open Data in Electronic Administration.

Data Catalog Site “data.go.jp” beta has launched (Dec 20, 2013)

Past Open Data Initiatives in Statistics

- The “Portal Site of Official Statistics of Japan (e-Stat)” established in FY2008 provides statistical tables of government agencies in a unified and integrated manner.
- Establish the database of “Fundamental Statistics” and other statistics.

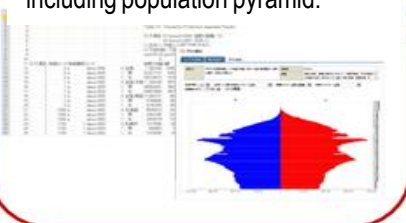

The screenshot shows the e-Stat website with the following sections:

- Search for statistics of Japan:** Includes a search box and a 'Search' button.
- Easy Access to main statistics:** Lists links for 'Japan in Figures and Graphs', 'Main Economic and Financial Statistics (MF SDDS Site)', 'Statistical Compendia', 'Regional Statistics', and 'Thematic Map (Japanese only)'.
- Learn metadata:** Explains basic terms and code of statistical data, with links for 'Statistical Classifications (Industry, Occupation, etc.)', 'Statistical Area Code', and 'Survey Item Database'.
- Quick poll:** A section for user feedback.
- Ranking:** A table showing search results for 'Gdp' and 'Population'.

- ❑ No. of accesses:
Approx. 18 million (FY2013)
*Accesses by crawler not included
- ❑ Analysis of trends of users
Personal users: Approx. 50%
Private companies: Approx. 22%
Gov. offices: Approx. 15%
Unis and educational institutions: Approx. 10%
Academic research institutes: Approx. 3%

Allows you to download statistics charts or prepare various graphs including population pyramid.

The use of regional statistics (statistics GIS) allows you to clearly understand what the region looks like.

Allows you to examine in detail questionnaires or their items for statistical surveys.

- Statistics tables
Approx. 500,000 tables for approx. 460 government statistics
- Statistical information database
Approx. 60,000 tables for 40 Fundamental Statistics and 9 other statistics

(1) Data shall be provided in formats appropriate for machine reading. -> Provide data in formats (e.g. XML) that allow you to automatically reuse (e.g. process, edit) the data

- e-Stat provides the statistics tables for almost all countries (in Excel, CSV or other formats) and statistics data (in the XML format) for the major statistics. However, it requires users to manually operate the computer and download data to acquire the data or tables.
- It is necessary to provide the function that allows you to automatically and mechanically acquire statistics data and facilitate data processing or editing.

- 
- Promote “advanced open data in statistics” including the establishment of API that allows you to automatically and mechanically acquire statistics data

(2) Data shall be released under the rules that enable secondary use. -> Reexamine the terms of use of websites, etc.

- It is necessary to reexamine the terms of use to widely allow for the secondary use of data.
- 
- The government has adopted the template for the terms of use of websites covering open data, which is scheduled to be implemented in FY2014. (Set out the principles of clearly stating the source and allowing for secondary use including the use for commercial purposes. Any exceptions resulting from legal or other restrictions shall be clearly stated.)

- ◆ As the central statistical organization, Statistics Bureau of Japan (SBJ) and National Statistics Center (NSTAC) are promoting the following three themes which will upgrade the methods for disseminating voluminous and diversified statistical data to the next generation level, and enable their advanced use.

1. Development of an Environment for Advanced Use of Statistics by API

2. Improvement of Statistics GIS

3. Study of on-demand tabulation functions

- ◆ This will promote advanced use of statistics by public and private sectors; support for creation of services which generate new value added, and of innovative businesses; and so on.

I. Introduction

II. Project 1: Development of an environment for advanced use of statistics by API

III. Project 2: Improvement of statistics GIS

IV. Project 3: Study of on-demand tabulation functions

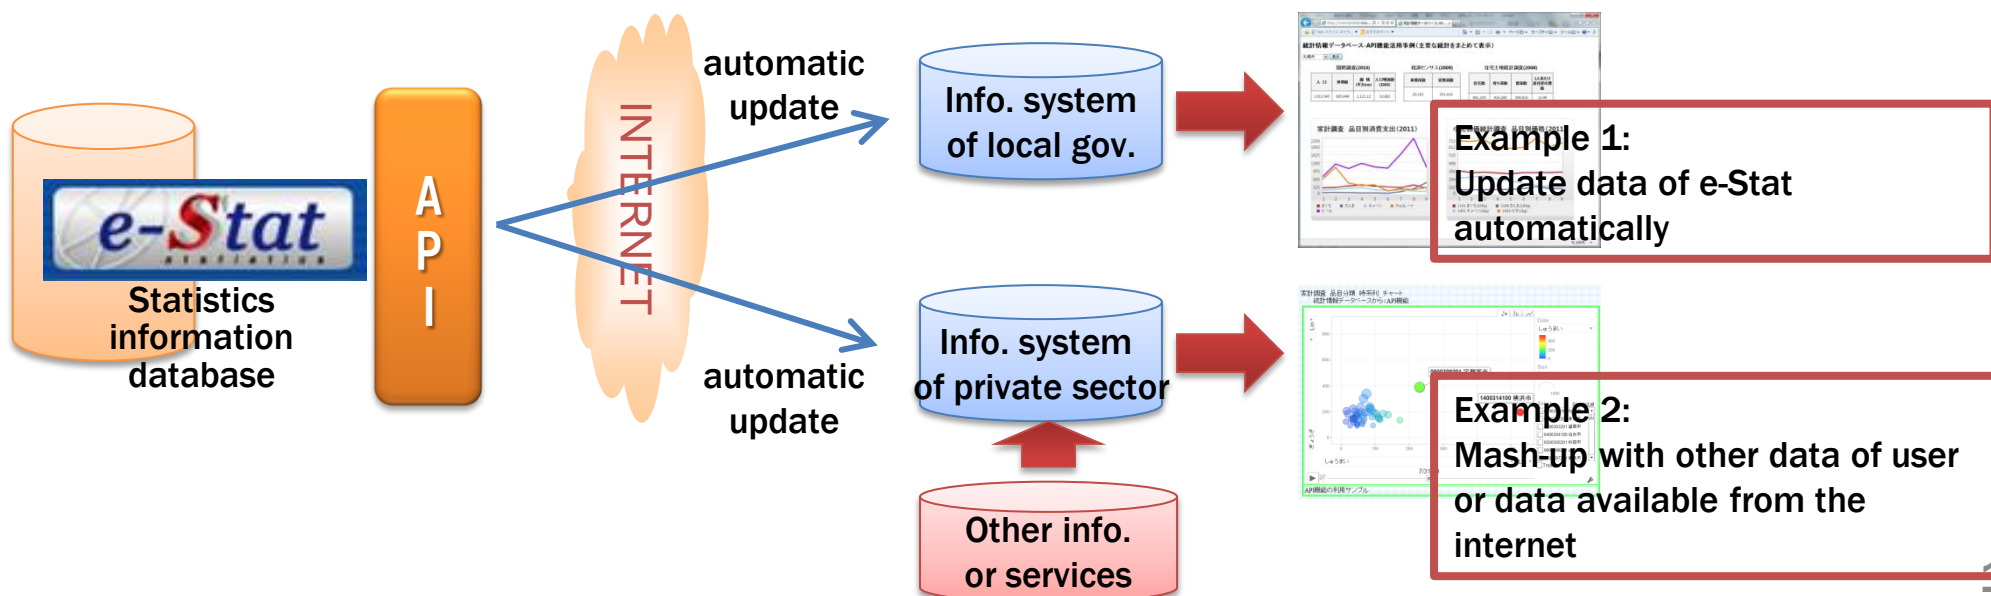

V. Future work and some implications

VI. Conclusion

- ◆ SBJ and NSTAC started a trial run of API functions for official statistics on 10 June 2013 in order to develop an environment for advanced use of statistical data.
- ◆ As of 31 July 2014, 2,131 users registered themselves, and the number is increasing steadily.
- ◆ To shift to high gear in 2014, functions and stress tests are being verified, and comments from users are being collected.

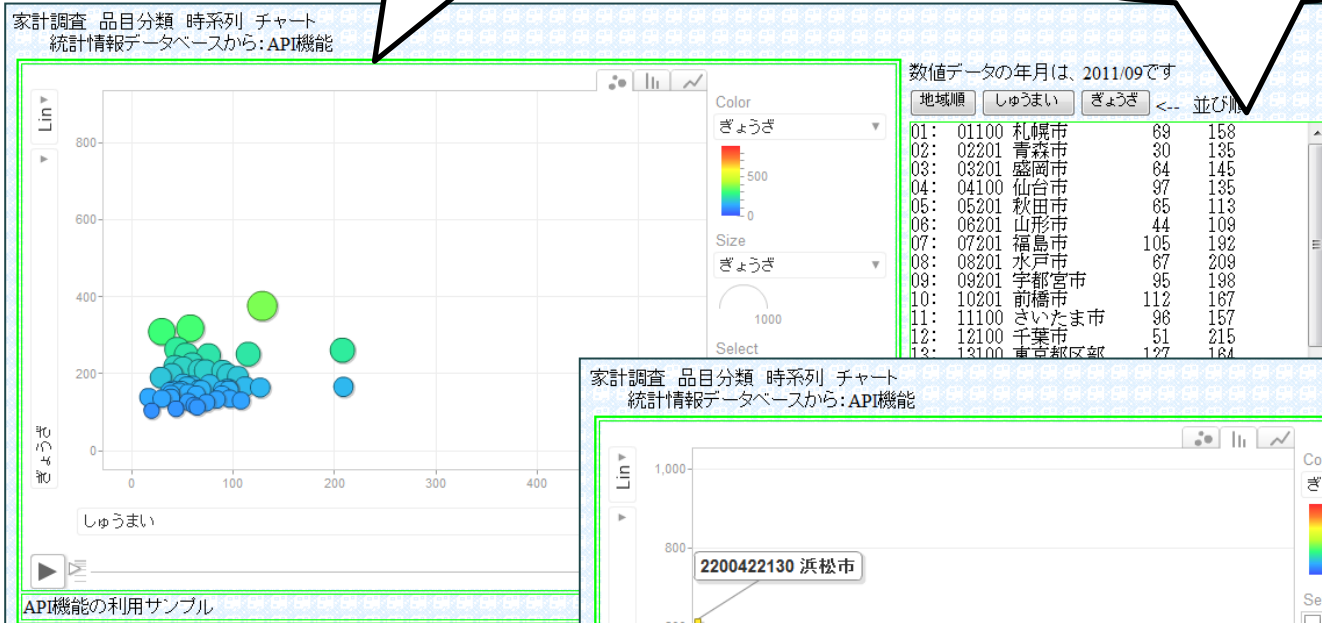

Outline of API function

API (Application Programming Interface) function has been newly added to e-Stat enabling the conversion of statistics data to machine readable data.

Presenting data in a bubble chart

Presenting the latest monthly data every time the data base is updated

Presenting data in a bar chart

The statistics data of consumer spending on Chinese dumplings (results of Family Income and Expenditure Survey) by prefectural capital or ordinance-designated city is acquired by API and superimposed with the program available on the Internet (mash-up).

- ◆ A trial version of “App on Statistics” (for Android) was released on 15 April 2014
- ◆ The app interlocks the statistical API functions with the smartphone GIS to display the statistics data of your current location, and provides other functions that allow you to feel familiar with statistics data.

Pocket Statistics

City Stat

Displays statistics data of your location using GPS

A location may also be specified to display the data

Displays a list of statistics data on each item

I. Introduction

II. Project 1: Development of an environment for advanced use of statistics by API

III. Project 2: Improvement of statistics GIS

IV. Project 3: Study of on-demand tabulation functions

V. Future work and some implications

VI. Conclusion

- ◆ To improve Statistics GIS on e-Stat, there is a new system under development that enables retrieving data held by users and analysis of statistics data in an arbitrarily designated area.

The addition of functions enabling

- ① retrieving data held by user
- ② compiling statistics data in an arbitrarily designated area

- ◆ On 18 October 2013, a trial run started under a user registration system.
(Functions and stress tests are being verified through provisional dissemination of statistics provided by SBJ. 1,077 users are registered as of 31 July 2014)

II. Project 1: Development of an environment for advanced use of statistics by API

III. Project 2: Improvement of statistics GIS

IV. Project 3: Study of on-demand tabulation functions

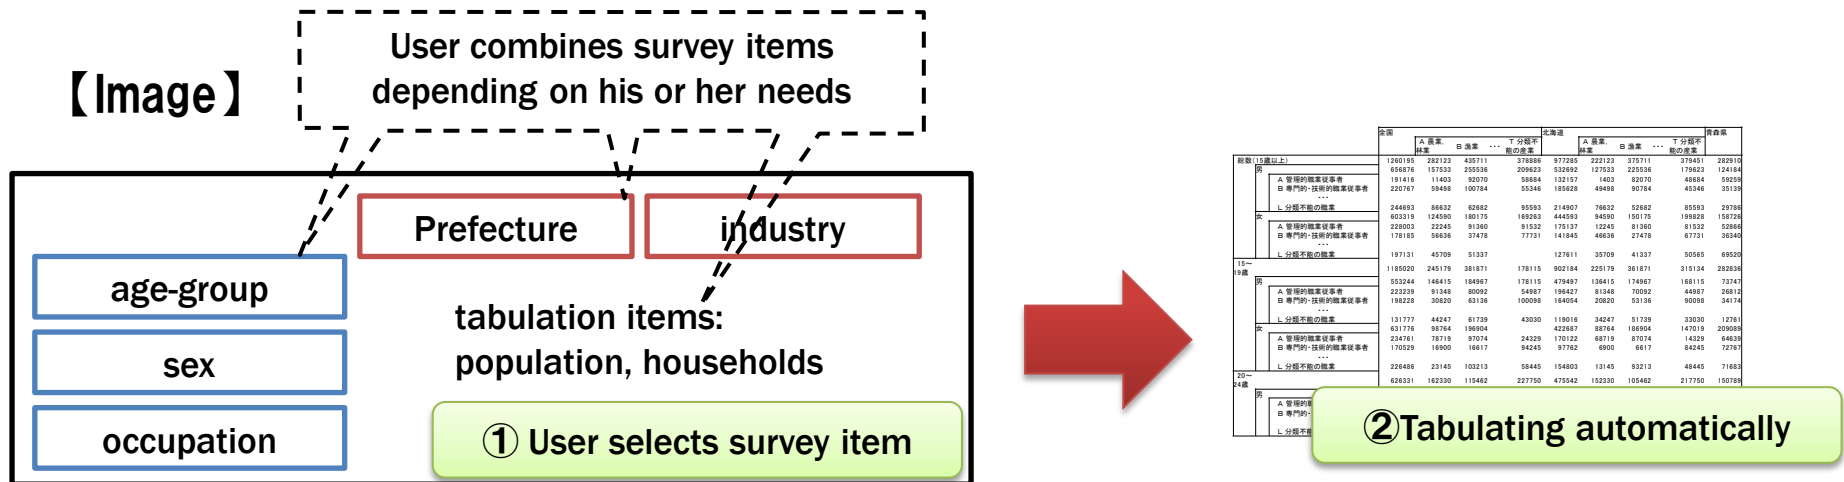

V. Future work and some implications

VI. Conclusion

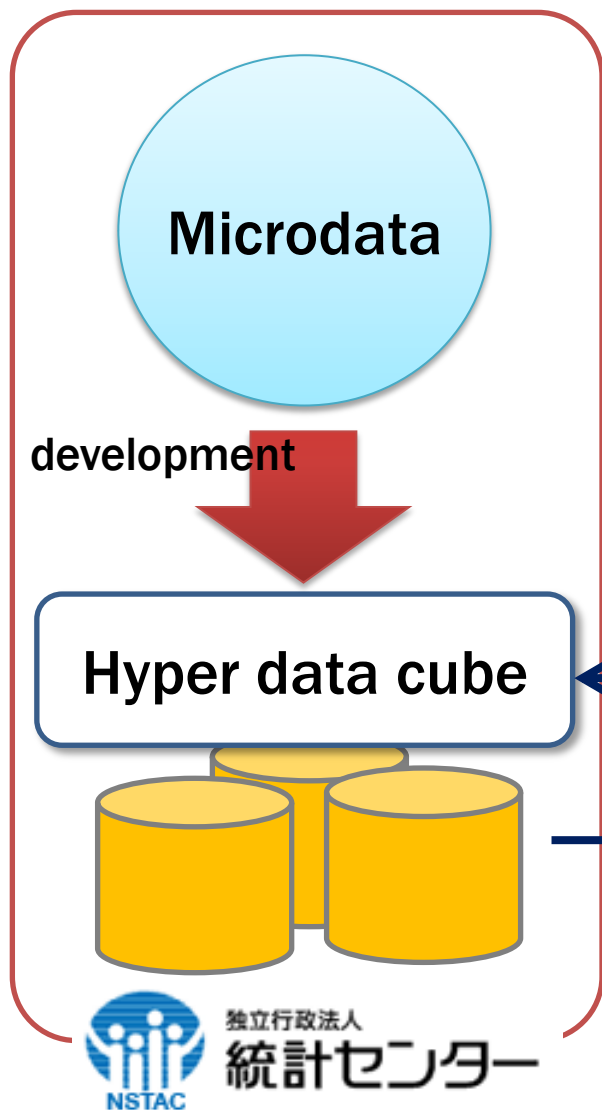

Study of On-demand Tabulation Functions

- ◆ A new statistics delivery service which puts out statistics table automatically when a user selects survey item is currently under study. This service will possibly be used by the public as well as the academic sector.
- ◆ It is expected that this new function will answer various needs such as academic research, enabling arbitrary cross tabulation which is not included in existing tables.

*For practical use, there are some issues to be solved regarding operational and institutional aspects and confidentiality.

1. NSTAC develops Hyper data cube using microdata

2. Users designate survey items

Users

INTERNET

3. On-demand tabulation functions apply tabulation and disclosure control from Hyper data cube and output secured statistical tables automatically

• Tabulation
• Disclosure Control

Initiatives of On-demand Tabulation Function

Base data	Outline	Adoption example
Multidimensional tables or data cubes	Providing tabulation prepared in advance, tabulating in combinations by assumable needs	“StatLine,” Statistics Netherlands “Interactive Data Dissemination System,” Census and Statistics Department of Hong Kong
Hyper data cube (High level multidimensional table)	One table tabulated in all survey items and classifications	“Census CDATA Online,” Australian Bureau of Statistics
Microdata	Search and tabulation by microdata	“Advanced Query System,” US Census Bureau “Census Table Builder,” Australian Bureau of Statistics
